Course: Big data in health research

In modern health research, it is essential that all stakeholders are aware of the huge amounts of available information, also referred to as 'Big Data'. This information ranges from genetic information to electronic health records and high-resolution imaging data, but also includes data from e.g. social media, and medical devices. In this summer school, jointly organized by University College London (UCL) and University Medical Center Utrecht (UMCU), you will:

- Learn the key characteristics of big data in health research.
- Learn recent developments in health informatics to collect and access big data for research purposes
- Discuss different approaches for data analysis and learn how to visualize big data

When: 19-23 August, 2019
Where: University Medical Center Utrecht, The Netherlands
Apply through Utrecht Summerschool: https://utrechtsummerschool.nl

Take a look at our other basic and advanced epidemiological courses in:

· Clinical Epidemiology
· Veterinary Epidemiology
· Epidemiology of Infectious diseases
· Environmental and occupational Epidemiology
· Pharmacoepidemiology
· Medical Statistics
